

Intermittent Glue

Linerless

A Smarter Breakthrough in Linerless Labelling

Labelmakers introduces '**Intermittent Glue Linerless**' (IGL) – our linerless innovation designed to deliver adhesive with maximum line efficiency and now backed by a granted Australian patent. By applying adhesive strips only where they are needed, this technology minimises adhesive build-up, shortens the machinery cleaning process and improves label cutting accuracy; whilst ensuring smooth, reliable performance on all application lines.

Our patent protected technology not only enhances application consistency and reduces downtime but also lowers adhesive usage and eliminates liner waste – supporting both operational improvements and sustainability goals.

Innovative by design and engineered for performance, IGL proves that smarter adhesion delivers better results – as our customers have seen since 2023.

IGL by Labelmakers — 'patented innovation advancing customer applications, not just print'
